

PHILIPPINE DEMOGRAPHIC PROFILE

The Philippine total population reached 109,035,343 as of 01 May 2020 based on the 2020 Census of Population and Housing. This represents an increase of 8,053,906 individuals from the 2015 population count of 100,981,437 or an annual growth rate of 1.63%, higher than the 1.72% recorded between 2010 to 2015. Projections using the 2015 Census results estimated that population will grow to 112.89 million by mid-2023 and to 115.38 million by mid-2025 (*Figure 1*).

Regional population and Annual growth rates. The CALABARZON Region had the largest population share among the 17 regions at 16.2 million with 14.9% share (*Table 1*). Combined with the populations of the

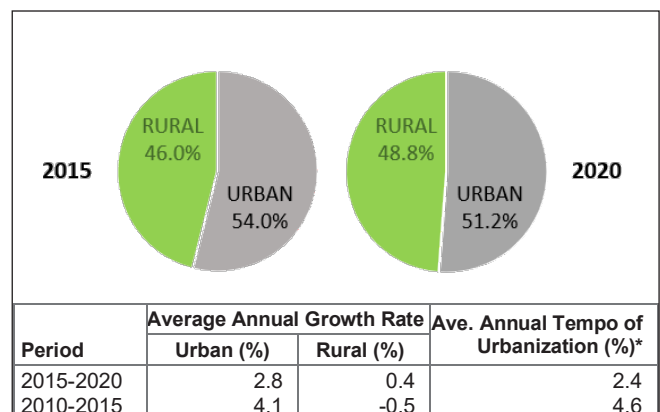

Facts in Figures

Congressional Policy and Budget Research Department
House of Representatives
May 2023 (No. 28)

NCR, Central Luzon, Central Visayas, and Western Visayas, these regions constituted more than 50% of the total population. The BARMM had the highest rate of population growth at 3.3%, followed by CALABARZON at 2.5%. Conversely, the Eastern Visayas was the slowest growing region at 0.5%.

Urbanization. The level of urbanization slightly declined from 54.0% urban population in 2015 to 51.2% in 2020 (*Figure 2*), due to the slower average annual growth rate (AAGR) for urban areas at 2.8% from 2015 to 2020, compared to 4.1% from 2010 to 2015. Rural areas recorded a 0.4% AAGR, reversing the 0.5% decline in AAGR for the period 2010-2015. The resulting tempo of urbanization or the speed at which an area is moving toward an urban classification is 2.4% between 2015-2020, significantly lower than the 4.6% in 2010-2015.

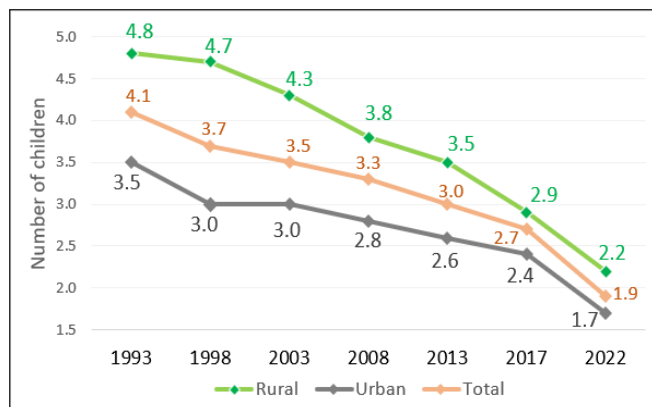

FIGURE 2
LEVEL OF URBANIZATION (2015 & 2020) AND TEMPO OF URBANIZATION (2010-2015; 2015-2020)

* Note: Tempo of urbanization is derived from the difference between the growth rates of urban and rural populations.

Fertility rates. Total fertility rate (TFR) further went down to 1.9 children per woman in 2022 from 2.7 in 2017. This is already below the replacement fertility level of 2.1 (Figure 3). The downtrend in fertility rates is clear in both rural and urban areas, with the latter declining at a faster rate. *More details on the TFR and other findings of the 2022 NDHS are available at the CPBRD Facts in Figures 2023-16.*

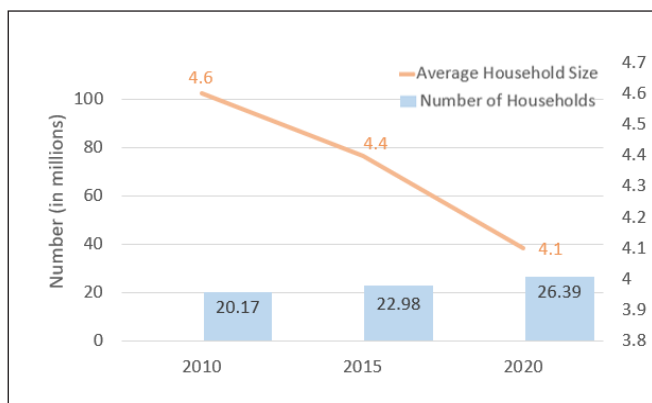

FIGURE 3
TOTAL FERTILITY RATES, 1993-2022

Note that the total fertility rate is the average number of children a woman would have by the end of her childbearing years if she bore children at the current age-specific fertility rates.
Source: PSA NDHS (various years)

Household size. The 2020 total population of 109.0 million consists of 108.7 million in households and 405 thousand in institutional living quarters such as lodgings, nunnery, military stations, and others. The average household size in 2020 is 4.1 persons, lower compared to the figures in 2015 (4.4) and 2010 (4.6) (Figure 4).

NUMBER OF HOUSEHOLDS AND HOUSEHOLD SIZE, (2010, 2015, 2020)

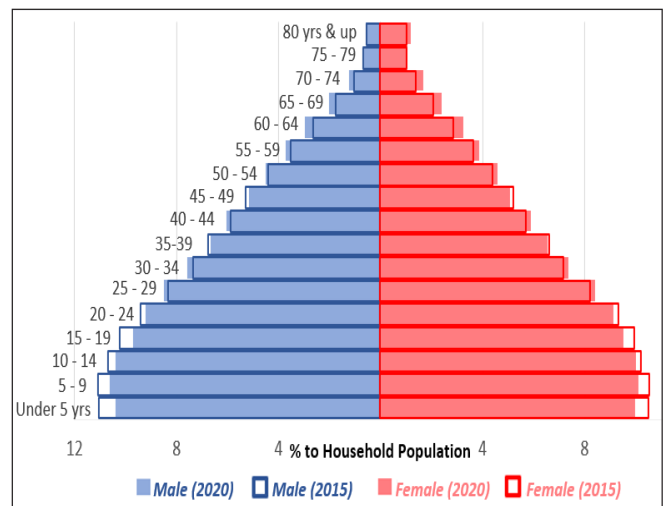

Source: PSA 2010, 2015, 2020 Census

Age and Sex distribution. In 2020, the male to female ratio was 103:100, with higher ratios among aged 0-14

at 107:100 and lower ratios among aged 65 and older (73:100). This is evident in the wider red bars at the top of the population pyramids for 2015 and 2020 (Figure 5), reflecting the decline in the fertility rate, as shown by the slightly narrower 2020 base compared to 2015.

Dependency ratios and Population of select age groups. There were about 57 dependents for every 100 working-age Filipinos in 2020, mostly consisting of 48 young dependents and 8 old dependents (Table 2). Furthermore, the school-age population (5-24 years old) increased by almost 2 million from the 2015 level, reaching 42.78 million, translating to two out of every five household population. Additionally, the number of senior citizens grew by 1.7 million, totaling 9.22 million.

TABLE 2
AGE DEPENDENCY RATIO AND HOUSEHOLD POPULATION OF SELECT AGE GROUPS, 2015 AND 2020

Age Dependency*	2015			2020		
	Both	Male	Female	Both	Male	Female
Overall	58.0	57.7	58.2	56.6	56.0	57.2
Young (under 15)	50.5	51.5	49.4	48.1	49.0	47.3
Old (65 and up)	7.5	6.2	8.8	8.4	7.0	9.9
Population in millions						
0-14 years old	32.14	16.58	15.55	33.41	17.27	16.14
5-24 years old	40.84	20.90	19.93	42.78	21.98	20.80
15 - 64 years old	63.7	32.2	31.5	69.4	35.3	34.1
60 years & over	7.53	3.33	4.21	9.22	4.10	5.12
65 years & over	4.78	2.00	2.77	5.86	2.48	3.38
